# Event-Driven Architecture

Building Event-Driven Microservices

# Event-Driven Architecture

A software architecture pattern promoting the production, detection, consumption of, and reaction to **events**.

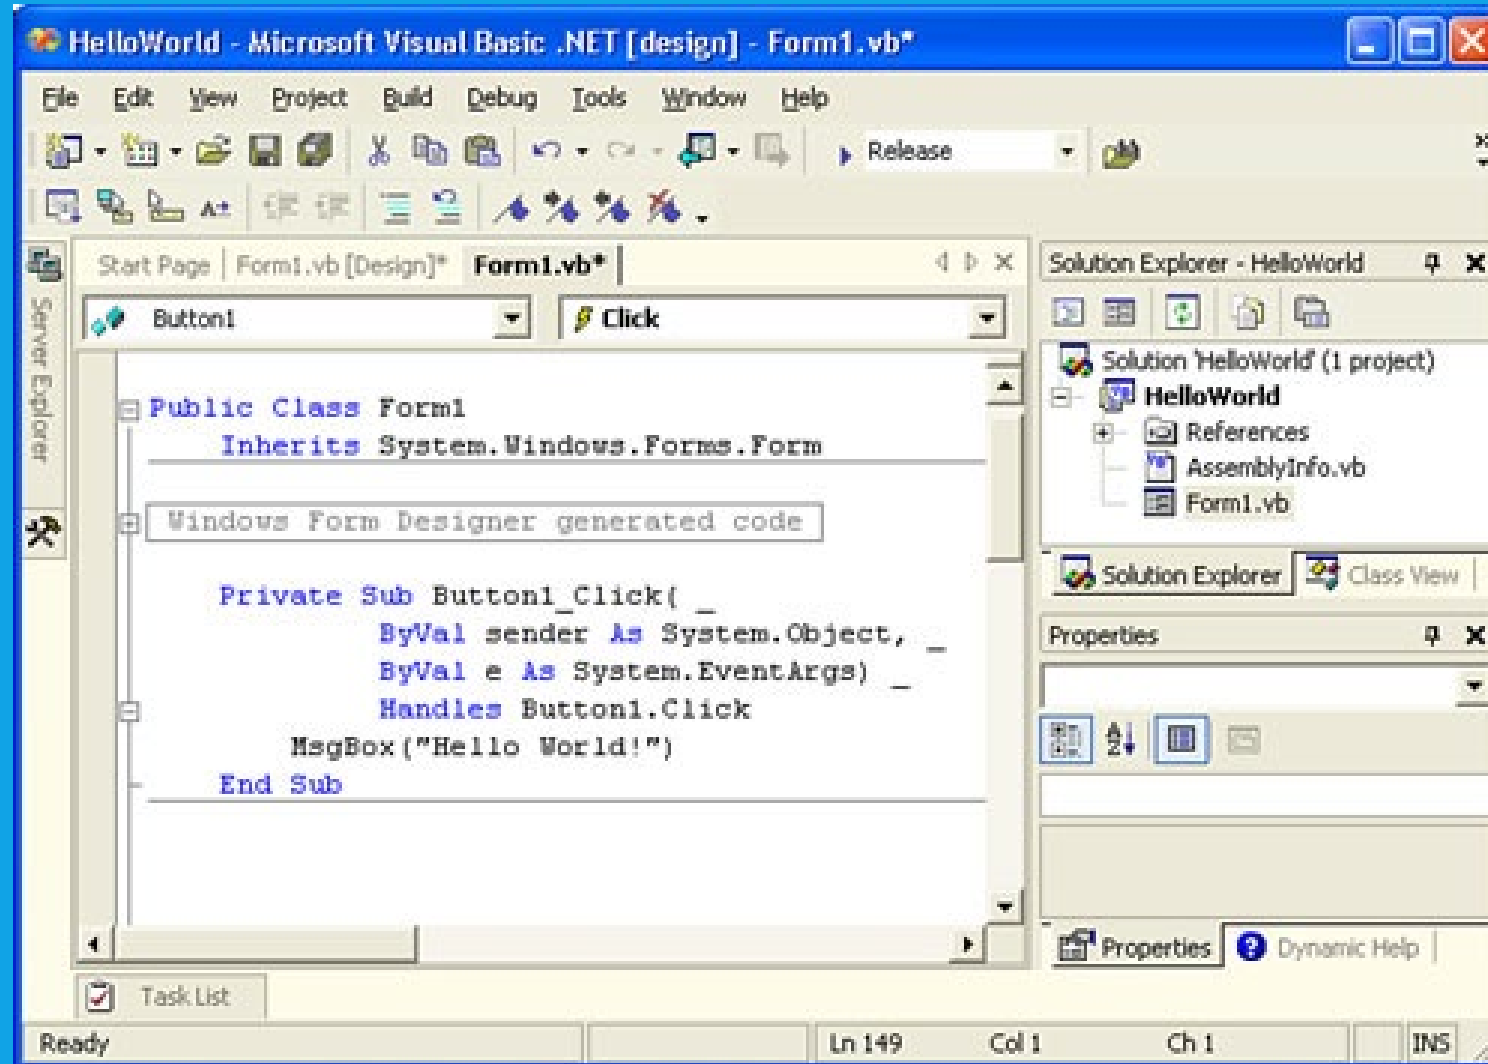

- Wikipedia -

# Event-Driven Architecture

# Event-Driven Architecture

# Event-Driven Architecture

Event-driven architecture (EDA) is a design paradigm in which a software component executes in response to receiving one or more event notifications.

EDA is more loosely coupled than client/server paradigm because the component that sends the notification doesn't know the identity of the receiving components at the time of compiling
